

User Name: Priya

User Type: 20-year-old college student

Order Frequency: Orders food online 2-3 times a week when she has classes, assignments, or does not have time to cook.

Says

**"I need food that fits my student budget."
"Show me restaurants that deliver quickly."
"I want to know the final price before I pay."
"Good ratings and reviews are important to me."
"I prefer food that is neatly packed and fresh."**

Thinks

**"Will the restaurant accept my order quickly?"
"Is the discount really useful after adding delivery charges?"
"Can I trust the food quality from this restaurant?"
"What if my order gets delayed during lunch time?"
"Will the delivery partner find my location easily?"**

Feels

**Relieved when ordering is simple and fast.
Excited when trying a new dish.
Confused when too many charges appear at checkout.
Anxious if the tracking status does not update.
Satisfied when food arrives hot and on time.**

Does

**Opens the food-delivery app and checks nearby restaurants.
Uses filters for price, cuisine, rating, and delivery time.
Reads customer reviews before selecting items.
Adds food to the cart and applies available coupons.
Pays online, tracks the order, and shares feedback after delivery.**

Pains / Frustrations

Delivery fee makes a low-cost order expensive.
Restaurants sometimes cancel orders after confirmation.
Live tracking can be inaccurate or slow to update.
Food packaging may leak during delivery.
Customer support may take too long to respond.

Gains / Expectations

Clear total price with no hidden charges.
Reliable restaurant ratings and genuine customer reviews.
Quick delivery with accurate live tracking.
Fresh food packed safely and hygienically.
Easy refund or replacement for missing/wrong items.

Top 3 Insights and Proposed Fixes

Users worry about hidden charges.
Show food price, taxes, platform fee, and delivery fee clearly before checkout.

Users feel stressed when delivery updates are unclear.
Provide real-time order status, delivery-partner location, and delay notifications.

Users lose trust when food quality or items are incorrect.
Add restaurant packing checks and allow quick photo-based support for refunds or replacements.
